

SEMESTER 5 PROJECT PROPOSAL

Football-Connect

A global, multi-role web platform connecting players, academies, agents, and coaches — free to join, secure by design, built in four languages.

Student — Olufemi Emmanuel Olugbodi

Dept — Computer Software Engineering

Supervisor — Mr Umar Shehu Abdulwahab

AGENDA

What we'll cover

- The problem — why talent goes unseen
Structural gaps in grassroots recruitment
- What's next — the proposed phase
Matching, mobile, streaming, trust, revenue
- The solution — what's already built
Five roles, one secure platform
- How we'll execute it
Stack, phases, and why this order

02 · PROBLEM STATEMENT

Talent doesn't travel — opportunity doesn't reach it

- **Fragmented pipeline**
No formal route from player to academy, agent, or club
- **Administrative burden**
Recruitment run on spreadsheets and WhatsApp
- **No player self-promotion**
No credible place to put a CV, video, achievements
- **No agent verification**
Families can't confirm who they're really dealing with
- **Inefficient coaching job market**
Vacancies rarely reach beyond who's already known
- **Communication silos**
Conversations scattered, unmoderated, unrecorded
- **Language barriers**
English-only tools exclude the deepest talent pools
- **Trust & safety gaps**
Minors connected to adults, with no moderation model

One platform, five roles, no gatekeeping

Free, instant onboarding

Player, Academy, Agent, and Coach accounts register and are active immediately — no approval queue.

Open messaging

Any user can message any other user directly through a built-in, moderated inbox.

Live training in the feed

Any user can host a scheduled online training session with a join link — feed-native, no separate app.

Job board

Academies post coaching vacancies; coaches apply directly, applications tracked.

Admin moderation

Suspend, restore, or remove any account — with safeguards against locking out the last admin.

Security & 4 languages

Nonce-based CSP, rate limiting, bcrypt — in English, French, Portuguese, and Arabic (RTL).

From networking platform to talent pipeline

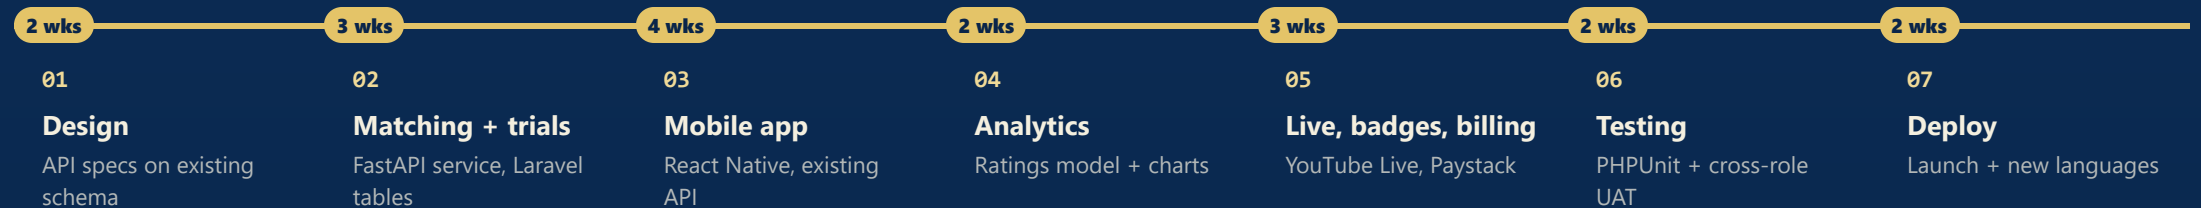

- AI-assisted player–club matching
Ranked shortlists instead of manual search
- Verified trial & scouting workflow
Formal request → accept/decline → outcome
- Native mobile app + push notifications
Mobile-first, where the users actually are
- Live streaming of training & trials
Remote scouting, no travel required
- Performance analytics dashboard
Coach ratings become a visible progress record
- Verification badges
A visible trust signal for agents & academies
- Subscription tier for pros
Sustains the platform — players stay free, always
- Spanish & Swahili added
Same i18n architecture, wider reach

Built on Laravel — extended, not replaced

LAYER	CURRENT	NEXT PHASE ADDITION
Backend	Laravel 11 (PHP 8.2), MySQL 8	—
Frontend	Blade, Bootstrap 5.3 (RTL build), Vite 6	—
Security	CSP nonces, rate limiting, bcrypt, CSRF	—
Matching & analytics	—	Python, FastAPI, scikit-learn
Mobile	—	React Native (Android + iOS)
Notifications	—	Firebase Cloud Messaging
Streaming	—	YouTube Live API
Payments	—	Paystack / Flutterwave

09 · EXECUTION PLAN

Seven phases, 18 weeks

Matching ships first — it extends data the platform already has. Mobile depends on those stable endpoints. Testing stands alone, so every feature is verified together, not just in isolation.

What changes when this ships

5

ROLES SERVED ON ONE LOGIN

- Wider, fairer discovery
Merit and profile quality replace luck and proximity
- Faster, accountable recruitment
Matching + structured trials replace spreadsheets
- Real trust and safety
Verification badges and auditable moderation
- A platform that pays for itself
Pro subscriptions fund it — players stay free, permanently

4 → 6

LANGUAGES, INCL. ARABIC RTL

10 · CONCLUSION

The foundation is built. This phase makes it work harder.

Football-Connect already gives every part of the football ecosystem a free, secure, multilingual place to find each other. The next phase adds precision — matching, verification, mobile reach, and a sustainable model — without touching the foundation that already works.

Free for players, always

Security-first

Built for underserved markets
